Motivation

Hacker hijacks 50,000 printers to tell people to subscribe to PewDiePie

The somewhat silly prank highlights a much larger problem.

EVERYTHING'S AN AD

This Guy is Hacking Printers to Warn About Job-Stealing AI

The "warning" also includes a coupon for his partner's courses.

Dan Robitzski | March 14th 2019

Dr.Moxmo @Dr_Moxmo Follow

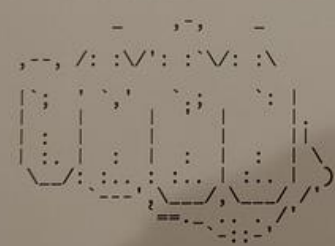

So this just randomly printed on one of our work printers. I think @pewdiepie has hacked our systems.

--- WHAT IS GOING ON ---

PewDiePie, the currently most subscribed to channel on YouTube, is at stake of losing his position as the number one position by an Indian company called T-Series, that simply uploads videos of Bollywood trailers and songs.

--- WHAT TO DO ---

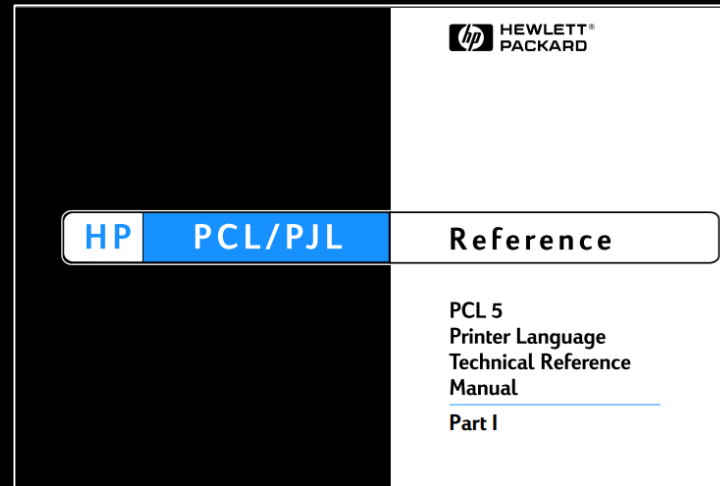

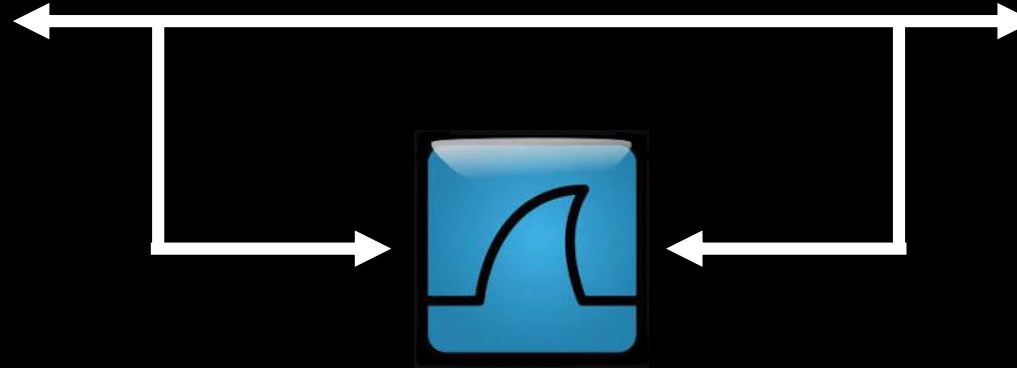

1. Unsubscribe from T-Series
2. Subscribe to PewDiePie
3. Share awarness to this issue #SavePewDiePie
4. Tell everyone you know. Seriously.
5. BROFIST!

Captured Print Job

The copyright-maximalist politicians who, for many years, have been at the helm of the European Union have passed Article 13. These corrupt politicians, alleging the need to uphold publishers' rights, has approved Article 13 by a 348 to 274 margin. It is true, we were, we are, overwhelmed by the votes of these politicians. It is these Article 13 supporters, coupled with the low public awareness of Article 13 which are causing us to retreat. It was these Article 13 supporters, coupled with the low public awareness of Article 13 that surprised ourselves to the point of bringing us to where we are today.

But has the last word been said? Must hope disappear? Is defeat final? No!

The same means that overcame us can bring us victory one day. For Internet is not alone! She is not alone! She is not alone! She has a vast population behind her. She can align with all the rest of us and continues the fight. She can, like us, use without limit the immense power of all of us.

This battle is not limited to the unfortunate territory of Europe. This war is not over as a result of the March 26th vote. This battle is a global war. All the mistakes, all the delays, all the suffering, do not alter the fact that there are, in the world, all the means necessary to crush Article 13 one day. The fate of the world depends on it.

At this moment, on behalf of the #SaveYourInternet movement, I invite everyone living in the EU who has the voting eligibility to vote every single one of those corrupt politicians who has supported #UploadFilters on March 26th, no matter their political spectrum, during the upcoming EU Parliament Election. I invite everyone to start mass peaceful protests all across the world, from Argentina to Australia, to pressure the governments of European Countries to withdraw their approval of Article 13 during the next EU Council meeting in April 9. In the unlikely event that we failed to repeal Article 13 by any possible means, I humbly invite the engineers and the specialised workers of the space industries to help us in creating a space colony be it on orbit or on Moon where we can continue enjoy and speak our mind without #UploadFilter's interference from the ground.

Whatever happens, the flame of the #SaveyourInternet must not be extinguished and will not be extinguished. May the force be with you.

Best Wishes,
Cyber Anakin

Planned Features

- “Support” common vulnerabilities
- Optional response delay
- Add HTTP web server

miniprint

build passing code quality A license GPL-3.0

A medium interaction printer honeypot

About

miniprint acts like a standard networked printer that has been accidentally exposed to the public internet.

It speaks the Printer Job Language (PJM) over the raw network "protocol"

Thank You
